```

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-11 and CARD-42. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follular lymphomas, carcinomas associated with muterions in p53, and covarian cancer, autoimmune disorders (such as systemic lupus erythematosus, immune-mediated glomerulonephritis), viral infections cuch as those caused by herpes viruses, poxviruses, and adenoviruses), neurological diseases (such as Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention Example 2; Fig 2; 116pp; English

AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression for treating or preventing disorders associated with increased PHSP expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human phosphorylation effectors useful for the diagnosis, treatment and prevention of proliferative, immune and neuronal disorders.
                                                                                                                                                                                                                                                                                                                                                                   cDNA sequence encoding a human phosphorylation effector PHSP-6.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                         232

                                                                                                                                                                                                                                                                                                                                                         synthesizing full length cDNA clones and their use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated be and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the the prince the printed specification, but was obtained in CD-ROM format directly from BPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  106 CysSerSerAlaIleIleAsnProLeuSerThrAlaGlyAsnSerGluArgLeuGlnPro 125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRRY-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligomocleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TTACAGAGTGTTTTCAAGTGCCATTCACCTATGTGACAAGAAAATGGAATTATCTCTG 1223

This sequence encodes the numan kick (kir-like interacting trapers) to protein of the invention. The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CDS signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compositions which will modulate the interactions of the various compositions in dentified; RC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DRED-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of capoptosis. Owerexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8.

Condentify inhibitors of the enzymatic activity of caspase-8.

Cidentification of ARC-1ike inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, contact of activative and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor capoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to apoptosis factors are potential drug candidates

Contact approximate and protein and propersis is needed. RICK interaction with intracellular actors such as CLARP and FADD appears to apoptosis factors are potential drug candidates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1165 TTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAAAAGAAAATGGAATTATCTCTG 1224

AAC77607 to AAC78448 encode the human cancer associated proteins given in ABB4338 to AAB4439. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidabetic; antiasthmatic; antitabetic; antiasthmatic; antibabetic; and intianglogenic. The polymucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Colymucleotides, polypeptides can be used for preventing, treating or ameliorating the proliferation, differentiation or mobilisation of the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral inflections. The peptides, mucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1385

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          75
The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polymucleotides, polymucleotides, agonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental Parkinson's disease, autoimmune and inflammatory disorders such as crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the polymucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CTGCCAGCTCCTCAAGACAATGATTTTTTTTTTTCTAGAAAAGCTCAAGACTGTTATTTTATG

Bertin J;

WPI; 2003-147109/14. P-PSDB; ABU56269 Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications.

Disclosure; Col 71-74; 99pp; English

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD) -4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD-4Y) polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologus polypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic cell death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immunoe related glomerulonephritis), viral infections, AIDS (acquired immunodeficiency syndrome), neurological disease (e.g. Alzheimer's and all and all and all assays (e.g. Alzheimer's and all and and all haematological diseases (e.g. anaemia, neutropaemia and myelodysplastic syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and cDNAS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human disease, Parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular atrophy and cerebellar degeneration), CDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes the isolation of novel human caspase recruitment domain, CARD-14 potpuncleotides and proteins and a partial activity by protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase corritment domain (CARD) polynucleotides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive medicine and therapeutic and prophylactic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The captures associated with abnormal level or rate of apoptotic cell death, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Tymphoma, caracinomas associated with mutations in psis and hormone-complex associated with mutations in psis and hormone-capthematosis, immune-mediated with mutations in psis and hormone-capthematosis, immune-mediated glomerulonephritis), viral infections, cretinitis pigmentosa, spinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke.

CARD-13 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cell survival. The CARD proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 spen can express a long transcript that encodes CARD-4sple and express a long transcript that encodes CARD-4sple as short transcript that encodes CARD-4sple as short as short transcript that encodes CARD-4sple as the human CARD-1 protein described in the method of the invention concess.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1213 AACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCATGAA 1272
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  45

                                                                                                                                                                                   8
                                                                                                                                                The present sequence is that of cDNA encoding human caspase recruitment domain 3 (CARD-3, see AAB20079). The cDNA was isolated following a database search using known CARD sequences. Plasmid pXE17A containing CARD-3 cDNA is deposited as ATCC 203037. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating callular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex. Complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6. Such disorders include cancer, viral infection, autoimmune disorders, neurological diseases, haematological disorders, inflammatory disorders and immune disorders. CARD nucleic acids can be used to express CARD proteins in a host cell e-g. for gene therapy applications, to detect a genetic lesion and to modulate CARD activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1392

The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of
                                                                                                                                                            205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      leucine rich repeat, LPS, lipopolysaccharide; NF-kB; nuclear factor-kappa B; cancer; viral infection; autoimmune disorder; systemic lupus erythematosus; immune-mediated glomerulonephritis; arthritis; immune disorder; multiple sclerosis; Hashimoto's thyroiditis; atopic condition; asthma; allergy; psoriasis; contact dermatitis; gastrointestinal allergy; insulin-dependent diabetes;

```
dentifying a candidate compound for modulating LPS (lipopolysaccharide)-
mediated activation of nuclear factor-kappa B (NF-kB), by providing a
cell expressing a polypeptide comprising the LRR domain of CARD-4 and
cell expressing the cell to a test compound and measuring NF-kB
activation, where altered NF-kB activation polypeptide in the presence of
the test compound compared to the binding in the absence of the test
compound indicates that the test compound is a candidate compound for
compound indicates that the test compound is a candidate compound for
modulating LPS-mediated activation of NF-kB. Modulators identified by
cm in useful for treating a disorder characterised by abserrant CARD-4
c protein or nucleic acid. Compounds that modulate the activity of CARD-41
care useful to treat or diagnose disorders such as cancer, viral
cinfections, autoimmune disorders e.g. systemic lupus erythematosus,
cinfections, autoimmune disorders e.g. systemic lupus erythematosus,
cinfections, autoimmune disorders e.g. systemic lupus erythematosus,
commune-mediated glomerulonephritis and arthritis, immune disorders, such
as multiple sclerosis, Habilmoto's thyroiditis, atopic conditions such as
allergies, insulin-dependent diabetes, bacterial infections, including
ct tuberculosis, and lepromatous leprosy, disorders of cell signalling and
constant of tissues. The present sequence is the human cDNA encoding

The invention relates to novel isolated Caspase Recruitment Domain (CARD)

polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may
be used to treat disorders associated with decreased CARD expression by
cupplementing the patient's own production of CARD. Disorders associated

with the expression and activity of CARD include cancers (particularly
follicular lymphomas, carcinomas associated with muterions in p53, and
follicular lymphomas, carcinomas associated with miterations in p53, and
consone-dependent tumours such as breast cancer, prostate cancer, and
ovarian cancer, autoimmune disorders (such as systemic lupus
covarian cancer, autoimmune-mediated glomerulonephritis), viral infections
cuch as those caused by herpes viruses, poxviruses, and adenoviruses),
neurological diseases (such as Alzheimer's disease, Parkinson's disease,
amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal
cunscular atrophy, and various forms of cerebellar degeneration), anaemia
sesociated with chronic disease, aplastic anaemia, chronic neutropenia,
and the myelodysplastic syndromes. This polynucleotide sequence

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-47, human CARD-42 contiguous amino acids of a human caspase recruitment domain (CARD)-47, profiled. Also included is an isolated fusion protein, comprising the colopypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous colopypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, contioning clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death corphylactic treatments (in diseases associated with apoptotic call death corphylactic treatments disorders (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. systemic lupus erythematosus cimmunodeficiency syndrome), neurological disease (e.g. shalinges continued and machological diseases) amyocardial infarction and stroke). The CARD polypeptide is sueful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and charact with other CARD corporation and charact corporation and charact corporation and charact corporation 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1212
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1273 AATAGTGGTTCTCCTGAAACTTCAAGGTCCCTGCCAGCTCCTCAAGACAATGATTTTTTA 1332

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator. CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNP) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p7s neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autolimmune disorders e.g. systemic lupus and immune mediated glomerulonephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present invention further describes a novel method for determining whether a test compound alters the binding of CARD-3 to p5, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide companie, and determining if binding is altered. This polymention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1332

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Ruben SM;

WPI; 2000-587533/55. P-PSDB; AAB43570.

Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer.

Claim 1; Page 751-752; 2352pp; English.

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length human cDNA of the invention. Note: The sequence dis a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   830 Primers useful for synthesizing full length cDNA clones and their in genetic manipulation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1. PHSP11 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1140 AGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAAATGGAATTATCTC 1199

```
Identifying agents for treatment or prevention of cytomegalovirus infection, comprises contacting test compound with cellular kinase detecting change in cellular kinase activity.
                                               cDNA encoding human cellular kinase RICK protein
                                                                       Human, virucide; cytomegalovirus infection; CMV; RIP; Nck-Interacting kinase; MKK3; SRPK-2; gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1461
The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Noklinteracting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1222 IGAACATACCIGIAAATCATGGICCACAAGAGGAATCATGIGGATCCICTCAGCTCCAIG 1281

```
New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.
                                                                                                                                  The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTGGTATAGCCCAGCAGTGGATCCAGAGCAAAAGGGAAGACATTGTGAACCAAATGACAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1222 TGAACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCATG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence encodes the human RICK (RIP-like interacting CLARP kinase) protein of the invention. The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified. ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK; sucseful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in during screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8. Identification of ARC-like inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and cardiac disorders. Therepeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. Antifick antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates
             Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, pagonists and antagonists are useful for diagnoshing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, paramitic, protozoan or helminthic infections. Furthermore, the polynucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy procedures. The current sequence is that of the human KPP cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AlDS, allergy or anemia), multiple sclerosis, osteoarthritis, cancer or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bandman O, Baughn MR, Becha SD, Borowsky ML, Duggan BM, Emerling BM, Forsythe IJ, Gandhi AR, Gorvad AE, Griffin JA, Guruzajan R, Hafalia AJA, Khan FA, Lal RG, Lee EA, Lee SY, Lindquist EA, Lu DAM, Lu Y, Marquis JP, Nguyen DB, Arvizu CS, Ramkumar J, Recipon SA, Richardson TW, Swarmakar A, Tang YT, Thornton MB, Tran UK, Chawla NK, Warren BA, Yang J, Yao MG,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1377 TATCTAGAAAAGCTCAAGACTGTTATTTATGAAGCTGCATCACTGTCCTGGAAATCACA 1436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         812
                                                                                                                                                                                                                                                                                   New Bl protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as A1DS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  452

cc domain, CARD-3 and CARD-4 polynuclectides and proteins and a partial murine CARD-11 protein and genes. The genes and proteins of the invention crecuitment domain (CARD) polynuclectides, polypeptides, homologues and recruitment domain (CARD) polynuclectides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell catch, abnormal activity of the Fas/APO-1 receptor complex, abnormal cativity of the TMF receptor complex, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Complex associated with mutations in p53 and hormone-cativity of the TMF receptor complex, or subcomman activity of a caspase. Complement tumours), autoinmune disorders (e.g. systemic lupus cappendent tumours), autoinmune disorders (e.g. systemic lupus cappendent tumours), autoinmune disorders (e.g. systemic lupus cappendent tumours), spinal muscular dystrophy, crebellar degeneration, cappendent spin mercial muscular dystrophy, crebellar degeneration, and stroke. CARD-3 protein interacts with other cellular proteins, and scroke. Compounds which modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-41, and CARD-42. This sequence compounds which modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-44 and CARD-42. This sequence compounds the human CARD-4 spilce variants. CARD-47 and CARD-42. This sequence compounds the human CARD-3 protein described in the method of the invention

complex

or abnormal activity of a cappase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. a small molecule, antisense nucleic acid, ribozyme or polypeptide. Such disorders include cancer, viral infection, autoimmune disorders, neurological diseases, haematological disorders, inflammatory disorders and immune disorders. CARD nucleic acids can be used to express CARD proteins in a host cell e.g. for gene therapy applications, to detect a

                                                The present sequence is that of cDNA encoding human caspase recruitment domain 3 (CARD-3, see AAB20079). The cDNA was isolated following a database search using known CARD sequences. Plasmid pXELA containing CARD-3 cDNA is deposited as ATCC 203037. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating cellular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with a benormal level or rate of apoptotic cell death, abnormal activity of the Ras/APO-1 receptor complex, abnormal activity of the tumour necrosis factor receptor complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and

human or murine caspase recruitment domain (CARD)-4L (long form)

characteristic devith a by contacting the polypeptide with a test compound and

determining the effect of the test compound on the activity of the

polypeptide to identify a compound which modulates the polypeptide. The

method may be adapted for identifying a compound which binds to the LRR

(leucine rich repeat) domain of CARD-4. Also included is a method of

identifying a candidate compound for modulating LPS (lipopolysaccharide)-

mediated activation of nuclear factor-kappa B (NF-KB), by providing a

cell expressing a polypeptide comprising the LRR domain of CARD-4 and

harbouring LPS, exposing the cell to a test compound and measuring NF-KB

activation, where altered NF-KB activation polypeptide in the presence of

the test compound compared to the binding in the absence of the test

compound indicates that the test compound is a candidate compound for

modulating LPS-mediated activation of NN-kB. Modulators identified by

(M1) are useful for treating a disorder characterised by aberrant CARD-4

protein or nuclear activation of NN-kB. modulators cativity of CARD-4

```
The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and hormone-dependent tumours such as brosst cancer, prostate cancer, and ovarian cancer), autoimmune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections cutch as those caused by herspes viruses, parviruses, and ademoviruses), neurological diseases (such as Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anaemia associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This polynucleotide sequence represents the CDNA of a human CARD relating to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and vixal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1931 BP; 613 A; 430 C; 416 G; 472 T; 0 U; 0 Other;

Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous polypeptide. The CARD polypeptide is useful in screening assays,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications.

biology), predictive medicine (e.g. diagnostic assays, proposeric assays, problogy), predictive medicine (e.g. diagnostic assays, prophylactic treatments (in diseases associated with apoptotic cell death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephritis), viral infections, AIDS (acquired immunodeficiency syndrome), neurological disease (e.g. Alzheimer's cimenanodeficiency syndrome), neurological disease, e.g. Alzheimer's pigmentosa, spinal muscular atrophy and cerebellar degeneration), haematological diseases (e.g. anaemia, neutropaenia and myelodysplastic syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD contents. Also disclosed are CARD-3 proteins and cDNAS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human CARD cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1052
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1870

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNF) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when a popotosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulonephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, heamatologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present invention further describes a novel method for determining whether a test compound alters the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide compariang the chard comparises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide compariant of the test compound, and determining if binding is altered. The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD)-4Y, polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide is useful in screening assays, polypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in disease associated with apoptotic call death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephritis), viral infections, AIDS (acquired immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, anyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular atrophy and cereballar degeneration), haematological diseases (e.g. anaemia, neutropaenia and myelodysplastic useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and cORMS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
